

Shahin-AI for Government and Banking

A secure, AI-powered GRC operating workspace built to map, evidence, monitor, and report against Saudi and international regulatory expectations.

Regulated work is fundamentally fragmented.

Organizations face a breaking point.

Governance work is scattered across files and disconnected systems, resulting in delayed risk visibility, manual evidence collection, and AI tools that cannot be trusted inside regulated operations.

One workspace connecting the entire GRC operation.

Designed for Saudi Regulated Operations

	Regulatory Alignment Matrix			
	Control Mapping	Automated Evidence Tracking	Executive Reporting	Gap Remediation
NCA (Cybersecurity)	✓	✓	✓	✓
SAMA (Banking CSF)	✓	✓	✓	✓
PDPL (Privacy)	✓	✓	✓	✓
ISO 27001	✓	✓	✓	✓

AI that works inside governance, not outside it.

AI assists the work; Shahin governs the decision.
Sensitive actions remain strictly controlled and auditable.

The un-replicable platform powering the product.

Strict segregation of architectural duties.

Platform Responsibility Split

DOS (Platform Core) Owns

Tenancy
Organization structure
Shared events
Provisioning infrastructure

DAuth (Security) Owns

Identity, MFA
Access profiles
Permissions
Segregation of Duties
Lifecycle authorization

Shahin-AI (Product) Owns

GRC modules
Product dashboards
Approval policies
Agent behaviors

The scale of the built technology asset.

Value is not only based on current sales; it is grounded in an existing, massively scaled architectural foundation and codebase.

Valuation Framework: Floor, Premium, and Upside.

Calculating the Valuation Floor: The Replacement Cost Logic

If a competitor started today, they would not just pay for raw coders.
They pay for architecture, security, domain research, and time.

What most buyers forget: The hidden non-code build cost.

Tiered enterprise pricing architecture.

Meaningful ARR requires dozens of clients, not thousands.

Revenue Potential Scenarios

Raising by milestone, not by hope.

Deal architecture: Protecting the core while scaling the product

Option A: **Strategic Seed**

- Direct investment for hardening, packaging, and pilots.
- Equity based on pre-money valuation floor.

--- IP Boundary ---

Option C: **Product-Layer JV**

- Partner funds commercialization of Shahin-AI specifically.
- Dogan AI OS remains core-owned.
- Revenue/equity split negotiated at product level.

The cleanest structure protects Dogan-AI OS while allowing direct investment into the high-growth commercial product layer.
