

The AI-Native Operating System for Governed Enterprises

Dogan-AI OS lets regulated institutions build, run, govern, secure, and scale AI-powered products with absolute sovereignty.

نظام تشغيل مدعوم بالذكاء الاصطناعي للمؤسسات المُنظمة

Moving from Fragmented Compliance to Governed Operations

Fragmented State

Row 1 Dimension

Evidence

Scattered files & emails

Row 2 Dimension

Approvals

Manual signatures & external systems

Row 3 Dimension

AI Usage

Black-box external tools & ungoverned shadow AI

Row 4 Dimension

Visibility

Delayed, static spreadsheet reports

Governed Future State

Row 1 Dimension

Evidence

Linked OS records with immutable lineage

Row 2 Dimension

Approvals

Maker-checker workflows with SoD rules

Row 3 Dimension

AI Usage

Governed, role-based, permission-aware agents

Row 4 Dimension

Visibility

Live executive intelligence and automated posture drift forecasting

The Sovereign Enterprise Architecture Stack

Four Control Planes Governing the Enterprise Kernel

DOS (Domain & Orchestration System)

- Runs products, tenants, workflows, and events.
- **AI Function:** Translates natural-language query to structured actions.

DAuth (Identity & Authorization)

- Controls who can do what, where, and when.
- **AI Function:** Access replay, policy simulation, and login anomaly detection.

DSOC (Security Operations Center)

- Detects security, behavior, audit, and control anomalies.
- **AI Function:** Posture drift forecasting and SoD violation pattern detection.

DNOC (Network Operations Center)

- Tracks service health, reliability, dependencies, and traces.
- **AI Function:** Predictive incident detection and capacity forecasting.

AI by Design: Embedded, Governed, Observed

AI Assembly Line

Durable by Temporal. Reasoning by LangGraph. Observed by Langfuse. Governed by DAuth. Isolated by RLS. Tool-safe by MCP. Air-gap ready by local models.

AI Suggests. Human Approves. The Platform Governs.

**AI operates inside governance, never outside it.
Every sensitive action requires permission checks,
fail-closed logic, and explicit human approval.**

Production-Grade Runtime and Service Separation

Takeaway Box

Structured as a live multi-service platform with dedicated services for identity, tenancy, workflow, AI, and observability. No monolithic bottlenecks.

Deployment Modes for Regulated Sovereign Environments

	SaaS-Shared	SaaS-Isolated	Private / On-Prem	Air-Gap-Ready
Infrastructure Control	 Dogan Cloud	 Dedicated Tenant	 Customer Data Center	 Disconnected Local Environment
AI Model Strategy	 Governed API LLMs	 Dedicated API LLMs	 Private Local LLMs	 Fully Offline Local Models (Ollama)
Data Sovereignty	 Guaranteed KSA Residency across all tiers.			 Absolute physical isolation.
Ideal Profile	 Mid-Market	 Regulated Enterprise	 Government Ministries	 Defense & Sovereign Banking

Mapping the Organizational Operating Fabric

Dogan-AI OS knows the organization before it manages the compliance work.

Every control has an owner.
Every risk has accountability.
Every approval has authority.

Prepared with Sovereign Backend Operating Content

Designed for Saudi Regulated Operations

Helps organizations map, evidence, monitor, approve, and report against Saudi and international regulatory expectations.

True enterprise simplicity requires profound architectural governance.

Synthesis statement

The seamless, intuitive experience of Shahin-AI I is only possible because the massive, invisible complexity of identity, AI governance, and workflow is handled entirely by the Dogan-AI OS kernel underneath.

Shahin-AI: The Premier Governed GRC Workspace

مساحة تشغيل ذكية وآمنة للحوكمة والمخاطر والامتثال والتدقيق

The first regulated product built on **Dogan-AI OS**.
Connecting governance, risk, compliance, audit, and AI into one trusted workspace.

Tailored Outcomes for Sovereign Sectors

Government Entities

Focus

- Policy compliance, department accountability,
- regulatory readiness, committee governance.

Outcome

Transforms scattered department evidence into cohesive, audit-ready institutional memory.

Banking & Financial Institutions

Focus

- Operational risk, SAMA control testing, incident tracking, approval governance.

Outcome

Gives the board real-time visibility into risk exposure, gap remediation, and third-party risk.

User Ring

Executives

Risk Teams

Compliance Officers

Auditors

IT/Security

Build Any Product. Run Any Tenant. Govern Every Decision.

Trusted Governance. Controlled Risk. Audit-Ready Intelligence.

حوكمة موثوقة. مخاطر تحت السيطرة. جاهزية تدقيق مدعومة بالذكاء.
